Comprehensive SEO Audit: Mithila Enterprises

1. Executive Summary & SEO Health Score

SEO Health Score: 58/100

- **Technical SEO**: 40/100 (Missing canonicals, domain mismatch)
- **On-Page SEO**: 45/100 (Missing OG tags, generic metadata)
- **Content Quality (E-E-A-T)**: 93/100 (High-quality educational fabric content)
- **Schema / Structured Data**: 30/100 (Basic, missing e-commerce specifics)
- **AI Search Readiness (GEO)**: 50/100 (Good content, poor structured entities)

Mithila Enterprises has excellent foundational content (especially the encyclopedia-like fabric category pages), but it suffers from critical technical and schema deficiencies that prevent search engines from fully understanding and ranking the site.

> [!CAUTION]
> **Domain Name Mismatch (Critical)**: The live domain is `mithilaenterprises.co.in`, but the internal `sitemap.xml`, `robots.txt`, and Schema.org markup are all hardcoded or defaulting to `mithilaenterprises.com`. This will cause search engines to reject your sitemap and ignore your structured data.

---

2. Technical SEO Analysis

🔴 Critical Issues

- **Missing Canonical Tags**: Pages do not declare a canonical URL. Search engines might index duplicate versions of pages (e.g., HTTP vs HTTPS, with/without `www`).
  - *Fix*: Configure `metadataBase` in `src/app/layout.tsx` to automatically generate canonical tags for all Next.js routes.
- **Sitemap & Robots.txt Domain Mismatch**: `NEXT_PUBLIC_SITE_URL` is undefined, causing the fallback `https://mithilaenterprises.com` to be used in `robots.ts` and `sitemap.ts`.
  - *Fix*: Set `NEXT_PUBLIC_SITE_URL=https://www.mithilaenterprises.co.in` in your environment variables, and update the fallback in the code.

🟠 High Priority

- **Missing Open Graph & Twitter Cards**: When links are shared on social media or messaging apps, they will not display a rich preview image or description.
  - *Fix*: Add `openGraph` and `twitter` properties to the `metadata` object in `src/app/layout.tsx`.
- **E-commerce Product Schema Incomplete**: The `Product` schema in `StructuredData.tsx` is missing critical properties like `image`, `offers` (price/currency), `brand`, and `aggregateRating`. Google will not display rich product results in search.

🟢 Good

- **Crawlability**: `robots.txt` correctly blocks `/admin/` and `/checkout/` paths.
- **SSR/SSG**: Next.js App Router properly pre-renders pages, making them easily crawlable by search engine bots.

---

3. E-E-A-T and Content Quality

Your content scores highly (**93/100**) due to the detailed, educational nature of the fabric category pages. The deep dive into the history, crafting process, and types of fabrics strongly signals Experience, Expertise, Authoritativeness, and Trustworthiness (E-E-A-T).

> [!TIP]
> **Leveraging E-E-A-T**: To further boost trustworthiness, consider adding an "Author" or "Reviewer" block to your educational content (e.g., "Reviewed by [Name], Textile Expert").

---

4. Local SEO & Maps Intelligence

Since Mithila Enterprises operates a physical warehouse in Alaknanda, New Delhi, capturing local B2B and wholesale search intent is crucial.

- **Current State**: The footer displays the address, but search engines cannot semantically parse it.
- **Recommendation**: Implement `LocalBusiness` schema (or `WholesaleStore`) with the exact Name, Address, and Phone Number (NAP) matching your Google Business Profile (GBP).

---

5. Prioritized Action Plan (The FLOW Framework)

This action plan walks through the **PERCEIVE → ANALYZE → VALIDATE → ACT** framework to ensure every recommendation is sound and falsifiable.

Phase 1: Critical Fixes (Next 48 Hours)

1. **Fix Domain Mismatches & Missing Canonicals**
   - *Observation*: The code hardcodes `.com` while the site is `.co.in`.
   - *Dependency*: Unblocks indexation and Schema parsing.
   - *Falsifiability Check*: Inspect the live HTML after deployment. If `rel="canonical"` is missing, or if it points to `.com`, the fix failed.
   - *Action*: Update `metadataBase` in `layout.tsx` and fix `StructuredData.tsx`.

Phase 2: High Impact Enhancements (Next 1 Week)

2. **Upgrade E-commerce Schema**
    - *Observation*: Product schema is missing price and image data.
    - *Dependency*: Unblocks Google Shopping free listings and rich SERP results.
    - *Falsifiability Check*: Run the URL through the Google Rich Results Test. If it flags missing `offers`, the fix failed.
    - *Action*: Expand `productLd` in `StructuredData.tsx` to include `offers`, `image`, and `sku`.
3. **Implement Open Graph & Social Metadata**
    - *Observation*: `layout.tsx` only contains a basic `title` and `description`.
    - *Action*: Add a default Open Graph image (`/images/og-image.jpg`) and configure `twitter:card`.

Phase 3: Growth Opportunities (Next 1 Month)

4. **LocalBusiness Schema**
    - *Action*: Add structured data for the Alaknanda warehouse to capture "wholesale fabrics near me" searches.
5. **Dynamic XML Sitemap**
    - *Action*: Ensure `sitemap.ts` dynamically generates URLs for all active products in the database, not just static routes.
